

TITLE

Daniela Verratti Souto

1 Introduction

1.1 Collostructional analysis and learner corpora

1.2 Research Questions

With the above in mind, this study sets out to answer the following research questions:

RQ1. How?

RQ2. Why?

RQ3. Do I have to?

RQ3 is a good question. Gries (2008) answers it by saying "yes". Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language. Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

2 Methods

2.1 Data: The EFCamDat

2.2 Extracting conditionals

2.3 Distinctive collexeme analysis

3 Results

4 Discussion

5 Conclusion
